

# BRN RANGE

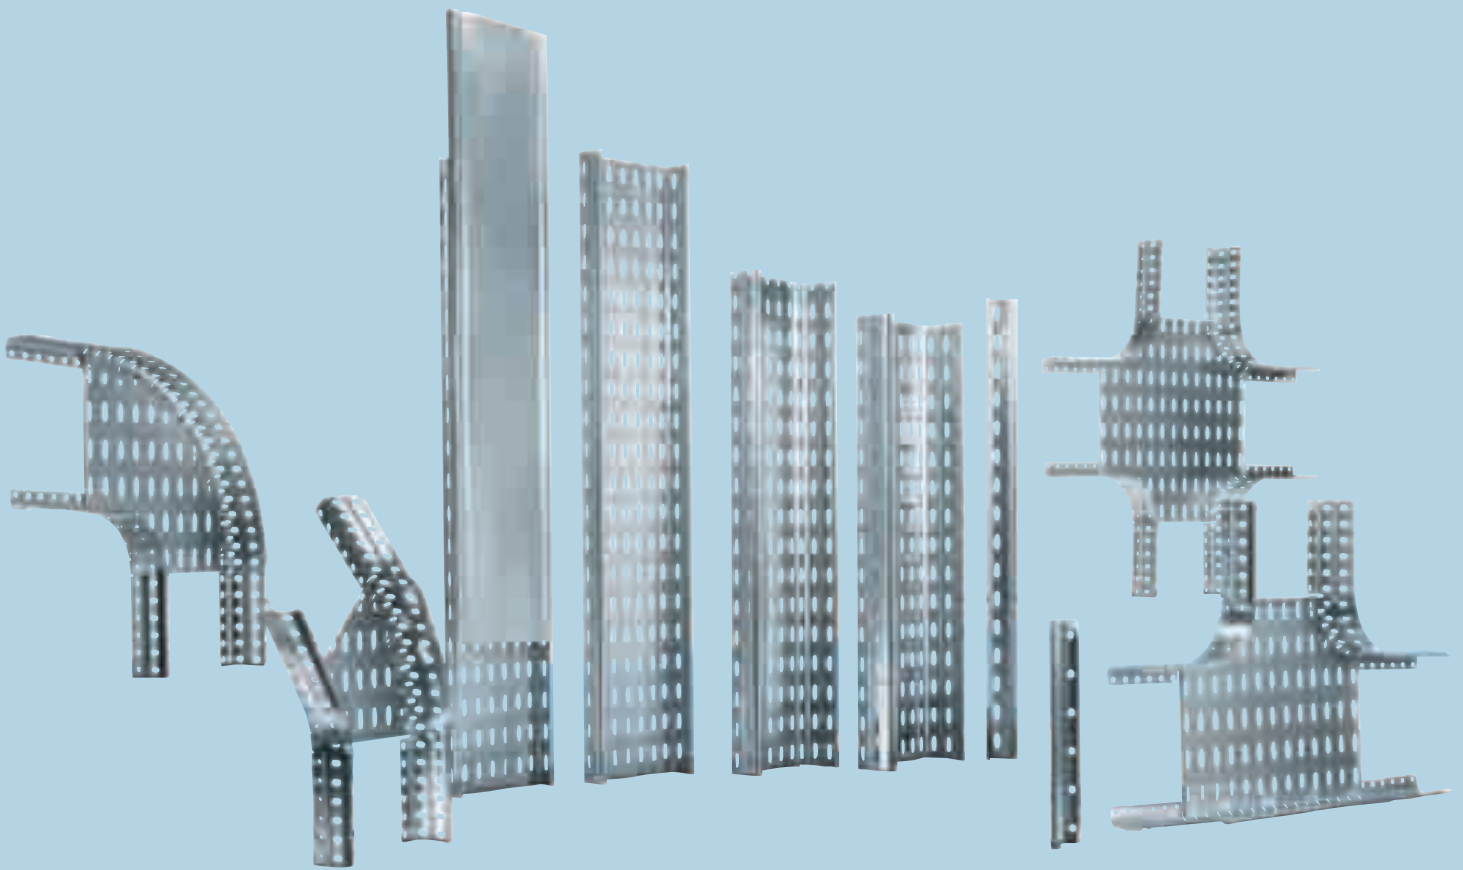

CABLE TRAYS IN GALVANIZED STEEL

**GEWISS**

## CHARACTERISTICS AND ADVANTAGES

### VERSATILITY

The drilled cable trays in BRN galvanized steel sheeting provide a complete system that can adapt to any installation situation due to the wide range of routing components available. The different sizes available cover all installation requirements with the right cable tray available for any type of cable load.

# BRN RANGE

CABLE TRAYS IN GALVANIZED STEEL

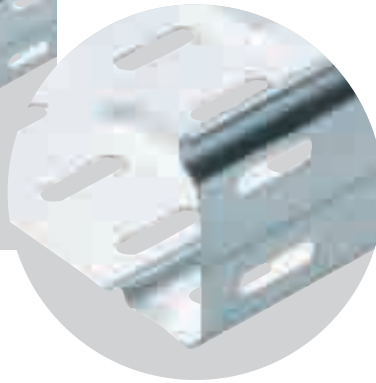

## CHARACTERISTICS AND ADVANTAGES

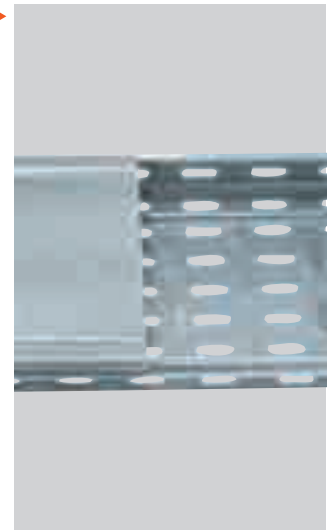

### SAFETY

The rounded upper edge profile (patented) ensures straightforward cable tray installation and safe cable laying.

### PRACTICAL

The safe speed-lock coupler inside the cable tray makes it more stable and increases the load potential. The cover is simply pressed into position onto the cable tray.

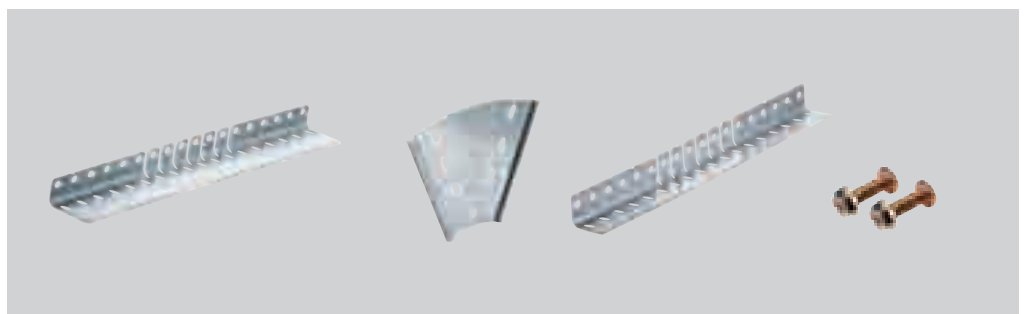

### STRENGTHENED BASE

The ribbed base increases load resistance and allows greater spacing of the supports lowering installation costs and increasing practicality.

### ECONOMICAL

Using horizontal or vertical multi-curve kits, elbows, T junctions and intersections can be made on-site reducing installation time and simplifying stock control.
