EFFICIENCY AND SAVING

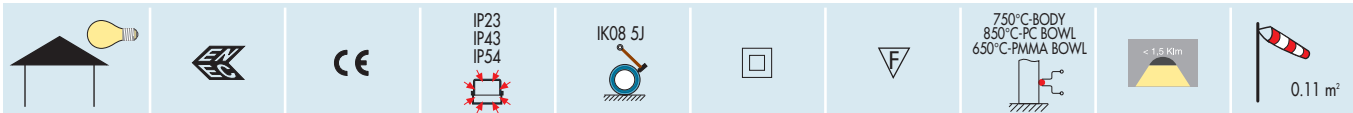

Road lighting with grey RAL 7035 polyamide casing. Reflector in aluminium 99.85 polished and anodized

All the luminaires have double insulation as to ensure greater electrical protection. The special entry allows poles with 35 mm to 60 mm diameters to be inserted with the same guarantee of hold.

Luminaires available with optical compartment protective bowl both in polycarbonate to favour mechanical sturdiness, and in PMMA to favour unalterable transparency over time. Notwithstanding its small size, City can house a wide range of discharge sources up to a maximum power of 150 W with sodium lamps.

CHARACTERISTICS AND ADVANTAGES

CITY RANGE

▲ POLE ENTRY

The special pole fixing brackets, accommodate poles having diameters of 35 and 60 mm to be tightened with the same guarantee of hold, whether with pole head or pole with arm entry.

▲ BOWL OPENING

The bowl fixing clip easily opens without the need for accessories. This makes lamp replacement immediate, even on the versions with closed optical compartment.

▲ SURFACE-MOUNTING

By using the special mounting accessory, City can be easily installed both on a wall and on a corner.

▲ ELECTRICAL SAFETY

City is a luminaire with double electrical insulation. Special attention has been paid to ensure insulation of the reflector with a special system of seals.
